OBJECTIVE

I am an engineering student with an interest in web development and UI/UX design, currently working on improving my programming and problem solving skills. I am looking for opportunities where I can apply my frontend knowledge and continue growing towards full-stack development.

EDUCATION

B.Tech – MERI College of Engineering & Technology (MERI CET)

Currently pursuing | 4th Semester

Relevant Coursework: Web Development, Programming Fundamentals

SKILLS

Technical	HTML, CSS, JavaScript, React (Basics), Swift (Basics), Figma (UI/UX Design)
Tools	VS Code, Git & GitHub
Core	Problem-solving, Time Management, Consistent Self-Learning

PROJECTS

FitLog – Gym Progress Tracker

2026

fit-log-gym.vercel.app | github.com/vermaabhii/FitLog

- Designed and shipped a fully functional workout tracking web app solo, covering 100% of the feature set from UI design in Figma to deployment on Vercel
- Engineered 5+ core features including exercise logging (name, weight, reps, date), a quick-stats dashboard, and a workout history with 3 sort modes and live search/filter
- Achieved 0 external dependencies by building the entire app in vanilla JS, keeping bundle size minimal and load time under 1 second
- Implemented persistent local data storage so users retain all workout history across sessions without a backend
- Designed the full UI in Figma before writing a single line of code, practising a structured design-to-development workflow used in professional teams

HACKATHONS & COMMUNITY

Code Kshetra 2.0 — DuAlert (Team Project)

2024

GeekRoom Hackathon, Delhi

- Collaborated in a team hackathon to build DuAlert, a browser extension preventing duplicate downloads
- Contributed to ideation, research, and implementation of SHA-256 hashing for file comparison
- Gained hands-on exposure to CORS handling, File System Access API, and IndexedDB
- Practiced collaborative development, project scoping, and pitching under pressure

Hack&Chill 3.0 — Degree Shield (Team Project)

2026

Hack&Chill Hackathon, Delhi

- Collaborate in a team to build **Degree Shield**, an academic certificate verification platform.
- Developed an OCR-based verification workflow for validating academic credentials.
- Used React, Node.js, Express.js, Tailwind CSS, and Supabase.
